

For Immediate Release

Innovative Software Engineering and The qMetrix™ Group Expands Technology Partnership for Healthcare Applications

CEDAR RAPIDS, IA – July 28, 2011 –The qMetrix™ Group is pleased to announce the expansion of their partnership with Innovative Software Engineering (ISE) in the healthcare industry. The qMetrix™ Group partnered with ISE as the technology implementer of their core qMetrix™ healthcare application and now is expanding its partnership to include customization and integration for their end customers.

The qMetrix™ system consists of secure, web-based applications for hospital quality improvement. The applications enable hospitals to move from retrospective quality data gathering to real-time collection, storage and reporting of core measures. Concurrent collection offers hospitals the opportunity to improve patient outcomes. The qMetrix™ fully integrated vendor reporting system saves hospitals money at the back-end by reducing the need for extensive chart reviews.

qMetrix™ applications include the support of CMS measures for Acute Myocardial Infarction, Heart Failure, Surgical Care Improvement, Pneumonia, and Stroke. In addition, Get with the Guidelines is available for hospitals reporting those metrics, reducing the need for duplicate entry of measure data. All reporting agencies can pull data from the qMetrix™ database as authorized by the hospitals. The applications are secure and HIPAA compliant.

“We have always had an outstanding relationship with ISE. This partnership brings together two companies with expertise in both software development and the healthcare industry,” states Willie Sneller, Principal of the qMetrix™ Group. “We look forward to a long and successful affiliation with ISE.”

“We are proud to be partnered with the qMetrix™ Group to create products to improve the quality of patient care. Their extensive domain knowledge in the healthcare industry coupled with ISE’s experience in custom software engineering and system integration, creates a great opportunity to deploy high quality products,” says Hass Machlab, President and CEO of ISE.

About ISE

ISE is a leading full-service software development and systems integration firm providing business strategy, program management, systems engineering, software development and quality assurance services. ISE specializes in developing telematics solutions, enterprise mobility applications and custom software tailored to customers’ unique needs. Customers come from a wide range of industries including communications, education, telematics, transportation and health care. More information can be found on the company's web site at www.iseinc.biz.

About qMetrix™ Group

The qMetrix™ Group is a VoIPcare Technology company. qMetrix™ specializes in developing quality improvement applications to perform inspections and report results. At the present time, qMetrix™ supports applications for Healthcare and Transportation. These applications are available on multiple platforms including PCs, Macs, smartphones, iPads™, iPhones™, and ruggedized handheld devices. qMetrix™ is currently working on customized versions of these applications for corporate accounts.
